2019

Wuhan University

B.A. in Political Science

2017

Research Interests

Religion and politics; authoritarian politics; Chinese politics; experimental methods; historical political economy

Dissertation Project

My three-essay dissertation addresses the puzzle of how Christianity, a religion long marginalized in China, has grown into a major religious force despite ongoing hostility from the Chinese Communist Party. I argue that this surprising growth stems from the unintended consequences of regime action and from strategic accommodation by religious leaders. The Party's early revolutionary campaigns to restructure society disrupted the existing religious field and dismantled entrenched institutions, creating space for new religious actors; Christian leaders, in turn, adapted their messaging to navigate social hostility and broaden their appeal. I test this argument with original experiments and surveys, extensive archival research, and qualitative evidence from fieldwork.
